

MDT

MDT OUTSOLES

Multi Directional Traction outsoles are all designed to provide maximum grip in specific directions. Herringbone tread is used within our Court products to improve grip sideways on the lateral side and forward facing tread through the centre of the shoe for grip when lunging. Within our Outdoor and Golf products traction lugs are used to optimise traction both uphill and downhill with a subtle brake pad at the heel for added durability and grip. Whatever your Sport, whatever the Terrain Hi-Tec MDT Outsoles make sure you never come unstuck.
